

Please amend the application as follows:

IN THE SPECIFICATION:

CLEAN VERSION OF THE AMENDED SPECIFICATION

Please replace the first paragraph on page 26, and insert instead the following paragraph:

--insufficient for releasing this motion, then the same is released by a pushing of the bolt B with a limit stop face 37 at a belonging limit stop 38 of the casing G upon further pressing of the pushbutton D. The locking of the locking bar R is effected by having the locking device A with a limit stop face 39 pushed against a limit stop face 40 of the casing G. The connecting element is easily held in the slightly lifted position by the spring force, which spring force operates onto the inclined face 35 of the locking device A through the bolt B. The locking device A is pushed upwardly by the web extension or, respectively, web S through the basal limit stop face 36 of the locking device A during reinsertion of the denture and the locking device A releases again the locking bar R.--
